To: Users of Epinephrine PFS

Subject: Mitigation of Pfizer Epinephrine PFS shortage

Dear user,

As you already know, Pfizer is currently on shortage for the Epinephrine PFS product. In the meantime, Aguettant is already working with Pfizer to supply as much product as possible. The Aguettant product (manufacturer code 600964) is an Epinephrine 1 mg / 10 mL (0,1 mg / mL) under a PFS format.

Because this crucial situation is serious, the following actions have been taken by Aguettant:

- Evaluate the current market needs to supply as much product as possible
- Increase production volumes of the Aguettant product
- Make available the short-dated products (products of the October 2024 expiry dates are being sent to hospitals)
- Ensure product availability for Pfizer user is distributed evenly across the country

Other actions are under evaluation and will be communicated once confirmed.

For the summer period, Aguettant will be able to supply only part of the market demand for the Pfizer users. As such, you might receive an e-mail with questions from Aguettant when you send *an allocation change request* through the CPDN system. We strive in treating your request within the same day it is received.

Please do not hesitate in contacting us should you have any further questions.

Best regards,

Suzanne Ménard  
General Manager
